Twelve Relay Board

We are instrumental in offering Twelve Relay Board. It is the simplest way to activate anything remotely. Easiest way to send the signal to remote location. Remote can be integrated with different signal generating point - Control panel, Micro-controller, Joy Stick etc. The relay operating mode can be momentary, toggle, latching, delayed action. Remote is small and light weight. Another bigger remote also can be provided for industrial use.

Specifications:

- Power Supply 12 V DC for both remote (generally battery operated) and relay board
- Wireless Relay Board-12
- Operates on 12 V DC– 2-pin connector (white) provided on board
- Operation Mode Selector: A set of six pin jumpers are provided with marking M (momentary), T (toggle) and L (latch). They stand for: M : momentary : Relay will be ON till the button is pressed, T : toggle : the relay will be ON when a button is pressed, it will be OFF when button is pressed again, L : latch : Only one relay will be ON at a time, when another button is pressed relay corresponding to that button will be ON , all other relays will be OFF
- Shorting first two pins from left makes operation M (momentary), Shorting middle two pins will make operation T (toggling), Shorting last two pins will make operation L (latching)
